

1	The Standard Models	1
1.1	What we know	1
1.2	What we don't know	2
2	Field theory basics	6
2.1	From Classical Mechanics to Field theory	6
2.1.1	Principles of Lagrangian construction	8
2.2	Field theory in curved spacetime	11
2.3	Effective Field Theories	12
2.4	Top-down approach to effective field theories	13
2.4.1	Effective theory for Nambu-Goldstone bosons I	14
2.5	Bottom-up approach to effective field theories	17
2.5.1	Relevant, marginal and irrelevant operators	18
2.5.2	Effective field theory for Nambu-Goldstone bosons II	19
3	The inflationary paradigm	21
3.1	The hot Big Bang paradise	21
3.1.1	Homogeneity and isotropy	21
3.1.2	Friedmann equations	24
3.2	Troubles in paradise	27
3.2.1	Horizon problem	28
3.2.2	Flatness problem	28
3.3	Inflationary paradigm	30
3.3.1	Minimal duration of inflation	31
3.3.2	Hubble flow parameters	31

3.3.3	de Sitter spacetime	32
4	Inflationary model building	35
4.1	Canonical scalar field dynamics	35
4.1.1	Slow-roll approximation	37
4.1.2	Attractor solution	39
4.2	UV sensitivity	40
5	Classical inflationary perturbations	41
5.1	The ADM formalism	41
5.1.1	Hypersurface geometry	41
5.1.2	Intrinsic and extrinsic curvature	42
5.2	Inflaton-gravity action in the ADM formalism	44
5.2.1	Scalar-vector-tensor decomposition	45
5.2.2	Physical degrees of freedom	45
5.2.3	Gauge fixing	46
5.3	Second-order action for perturbations	47
5.3.1	Scalar perturbations	47
5.3.2	Tensor perturbations	50
6	Quantum inflationary perturbations	51
6.1	Canonical quantization	51
6.1.1	Bogolyubov transformations	52
6.1.2	Choice of physical vacuum	54
6.1.3	Bunch-Davies vacuum	56
6.2	Quasi-de Sitter spacetime	58
6.2.1	Curvature perturbations	58
6.2.2	Tensor perturbations	58
6.2.3	Inflationary observables	59
7	Effective field theory inflation	61
8	Why does the Universe look classical?	63
8.1	Squeezing formalism in quantum mechanics	63
8.1.1	Classical upside-down harmonic oscillator	63
8.1.2	Quantum upside-down harmonic oscillator	64
8.2	Squeezing formalism in quantum field theory	66
8.2.1	Strong and weak coupling limits	68
8.3	Squeezing of cosmological perturbations	68

8.3.1	Bunch-Davies limit	69
9	The onset of the hot Big Bang	70
9.1	Post-inflationary evolution	71
9.1.1	Perturbative particle production	72
9.1.2	Non-perturbative particle production	74
10	Baryogenesis	82
10.1	Sakharov conditions	82
10.2	The Affleck-Dine mechanism	83
11	Vacuum stability	84
11.1	Decay of a metastable state in 1D quantum mechanics	84
11.2	Decay of a false vacuum in scalar field theory	85
12	Topological defects in cosmology	86
12.1	Phase transitions and finite temperature field theory	86
12.2	The Kibble mechanism	87
12.3	Cosmic strings	88
